Enabling The Connected World...

Leaders in Email Technology

A MODULAR FRAMEWORK WITH A FLEXIBLE APPROACH

Our mission is to enable our clients to achieve incremental revenue from their user base by deploying email security solutions in a low cap-ex business model.

EnableTS has built a reputation with its customer base as providing innovative and effective solutions, deployed and managed in a way that can guarantee five nines uptime and deliver impressive incremental revenues without the cost of a huge capital expenditure project.

TECHNICAL OVERVIEW

The EnableTS Platform is developed in .Net to allow for easy further development and integration within the Provider's existing infrastructure.

Consisting of a Central MS SQL Database, or clustered SQL, SAN and Mail Transfer Agents (MTA), the Platform sits upon Secure and Trusted Architecture.

Each MTA is capable of processing 250,000 connections per day and has resilience built in to the design.

The EnableTS Platform has pre-built API's to aid integration into the Provider's systems to allow a seamless administration and user experience

AVAILABLE MODULES

- Disaster Recovery
- Image Scanning
- IP Reputation Service
- Relationship Engines

...a flexible, low cap-ex hosted service proposition...

LICENSING MODELS

For smaller Providers...

Smaller providers who cannot meet the minimum user license commitments can take advantage of the Appliance option. Within the Appliance agreement, there are a number of included user licenses within the monthly fee. This allows smaller providers to easily and quickly become involved in the Security as a Service marketplace.

For larger Providers...

Larger Providers will already have a volume of users that can quickly be added to the system meaning that they can take advantage of the "license only" model. Providers pay only for the licenses as they use them. There are no setup, no software and no upfront costs to consider. Support of the Platform is included in the license costs and, depending on commitments, setup and configuration consultancy can also be included.

SALES & MARKETING SUPPORT

Our success is driven by the success of our Global Partners and that is why EnableTS offers both Sales & Marketing Support to Providers who are willing to engage fully with us.

Our experience as Global Providers gives us a unique insight into the current and future trends and requirements of the market at large. We can draw upon a wealth of experience which stretches across continents and the success of our partners relies of us drawing from that experience and sharing it.

That is why we not only support territories through both Market Development Funds and Co-operative Marketing schemes, but we also can fund sales heads where appropriate and can transplant successful sales starters from established markets to newly growing partners who welcome help in the Security as a Service Marketplace.

SPAM FILTERING

Providing 99.98% Spam detection by using multiple threat level engines which look at not only the content of the mail, but also build relationship patterns in the cloud, the EnableTS Spam Filtering Module also achieves our near zero false positive rates.

MODULAR REPORTING

EnableTS Reporting can be custom created and designed to give a specific provider either a value add advantage or a market advantage in their sector.

Complex reports such as bandwidth used by user or domain, storage utilization by user, company or domain and even mail flow volumes are all available.

DISASTER RECOVERY

With EnableTS's Disaster Recovery Modules to email is "always on" and recovery of email is instantaneous, all from within the cloud. The system can either include only Internet Travelling Email or both Internal and Internet Travelling Email.

BUSINESS CONTINUITY

Both the Enterprise and SME User needs constant access to their email in this day & age.

This EnableTS Module allows emails to be held in a secure archive for as long as the Provider specifies and, by lengthening the mail storage time, providers can gain access to valuable 'up-sell' Revenue
